

# Add-On Poly Forms

1" by 1"

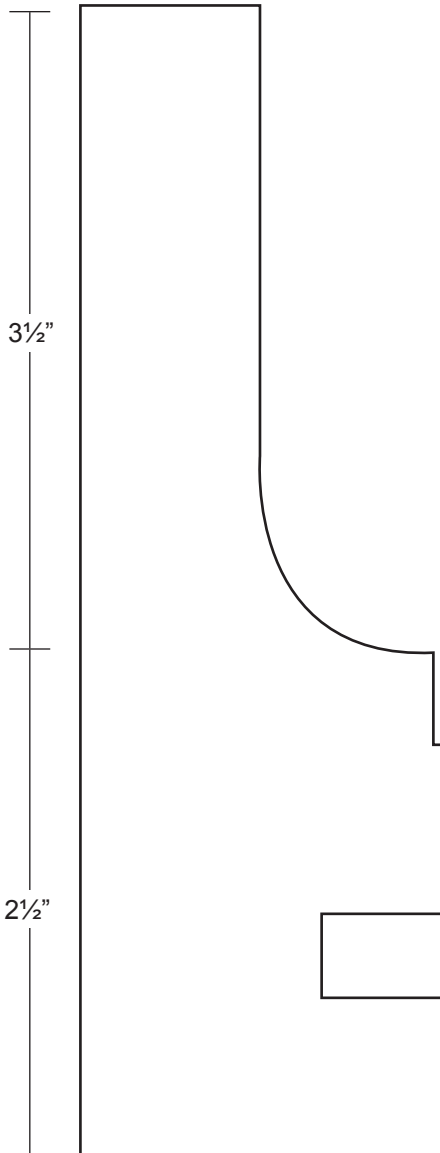

**Add-On Poly Forms allow the contractor to perform specialty work. Where some applications call for extended heights or widths, Mortex Add-On, Out Strips and One by Ones are the perfect addition.**

Add-on Poly's are used to extend the standard height of the concrete pour by an additional inch, making the height of the pour 4 ½ inches.

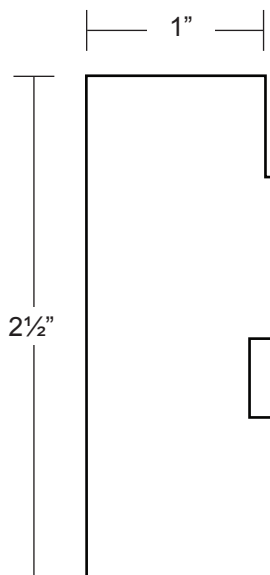

No Lip Poly's are commonly used when a sharp cantilever edge is needed.

1" & 1 ¾" Out Strips are used to extend the width of the cantilever edge. They are used in special circumstances such as extending the deck over the water, water ways under decks, specialty covers, specialty lighting, etc.

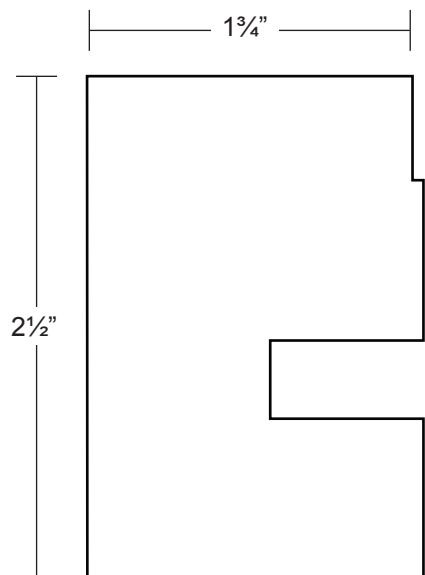

1" by 1"s can be attached on top of the No Lip Poly Form or are stackable to extend the height of the concrete pour to deeper pour elevations.
